Dental Care

TREAT YOUR PETS TEETH AS IF THEY WERE YOUR OWN!

HOW TO BRUSH

- Introduce brushing gradually – it may take several days or weeks
- Make initial sessions brief and positive
- First, dip your fingers into bouillon or tuna water and rub fingers over the pet's mouth and teeth
- Introduce gauze on your fingers with the same flavor juice and begin rubbing the teeth in a circular motion
- Put a small amount of toothpaste for pets on your fingers and allow the pet to taste it
- Finally, apply a small dab of pet toothpaste on a moist toothbrush and allow the pet to lick the bristles
- Begin brushing gently at a 45 degree angle away from the gum line
- Only the outside surfaces need to be brushed

ORAL CARE

- Plaque & bacteria can colonize on teeth in 24-36 hours – Brush it off every day before it mineralizes to calculus
- Apply Ora-Vet barrier sealant weekly
- Dental chews and treats may help if you can't brush your pet's teeth
- Specially formulated foods can also help during the in-between times
- Dental exams should be performed by your veterinarian at least once a year

NOTE: Toothpaste designed for people contains ingredients that may upset pets' stomach

CHEWS & TOYS

Kong or Gumma-Bones

Virtually indestructible for most dogs

Woof Ball, Beefy Baseball, or other durable rubber balls

Great for chasing and chewing

Buster Cubes and Activity Balls

Fill these toys with kibble or your puppy's favorite treat

Dental Chews

Ask us about our selection available for purchase for cats and dogs.

Stuffed animals are good but aren't appropriate for very destructive dogs
